Nautical Cloud Release September 2023 5.0.1

Self-Declarations

When sending self-dec emails or texts, the system will now remind you of the deadline that is set for the race and enable you to change it.

Protest Boards

Races, Regattas and Events now all have their own enhanced protest boards.

Export Race Entries

A new feature on a race under the Import/Export Tab for exporting a division's results. An example use case is when another organiser using the Nautical Cloud system is running a race, they can send you the exported results and you can import them into a race on your system. You may do this if you need the results to score your series.

Price Lists

We have added the ability to export a price list.

Country Restriction

When crew add their passports, you can restrict them from adding passports from certain countries.

Protest Co-Pilot AI

An experimental feature has been added to the protest area of the race office. You can now ask questions to our trained AI model from RRS. You can paste in full scenarios, ask complex questions about the rules, and get an AI opinion from the co-pilot.

Planned for Release in October

The ability for a competitor to file a protest online.

The ability for a competitor to interact with the Protest Co-Pilot to look at rules

Ticket Enhancements to cover more ticketing scenarios.

Inspection sheets and scheduling of inspections, the ability to allow inspector access and to have these inspections completed online.

Inspectors will have the ability to share an inspection sheet with a competitor and to have outstanding tasks for them to complete to comply.
