

## **Nautical Cloud Release September 2023**

### **Check-In function**

You can set this up on the race requirements. When on a race entry, you can check a race entry into a race or event. You are asked to confirm or edit the online mobile and if using YB tracker, the serial number allocated to the boat.

When viewing race entries, you can see all checked-in and non-checked-in boats.

### **Check Out function**

When setting the check-in option in race requirements, this will also enable a checkout button on each race entry with the associated checkout and not checked-out views and dashboard on race entries.

You also have the option to set a custom message for the checkout of a race. For example, you may wish to confirm that the competitor has declared, and they have returned their tracker.

### **Penalty and Redress**

You can now add a penalty or redress without adding any additional time. For example, if you would have applied a penalty but gave redress instead.

### **SMS limits**

SMS sends have been limited to 300 characters to prevent long texts from being sent as these consume multiple SMS messages and can be cost prohibitive.

### **Boat EPIRB Required**

The ability to make the boat EPIRB mandatory in race requirements and have an alert if this is not completed.

### **Races to count**

On a series class, you can override the number of races to count for that series class only. This will manage the discards separately for that series class as well as show the correct number of races to count on the series table for that class and other classes.

### **Enhancements to elapsed time penalty and redress**

When clearing a penalty or redress in the race office, the elapsed time updates immediately so you can see more clearly the impact on elapsed time.

### **Course records**

FIX – When a boat has beaten a rating authority record and there are subclasses for that division, only the boat that has the new record is awarded the new record.

Enhancement – When records are beaten, the new record time is shown at the top of the results and division pages, rather than the old records.

## **Self Declaration**

Ability to complete a self-dec on behalf of a competitor in the race office on the race entry.

When sending out self-declarations, you will be reminded of the self dec deadline and have the ability to adjust this before sending.

## **Protest Board**

Significant improvements for mobile and desktop view.

Display of time zone for dates – received on, hearing date time etc.

The protest board moved to the top of the noticeboard.

Link to protest board from live results and results

Ability to override the sequence numbers for protests. (Useful if you delete one)

## **Results and Live Results**

Scoring notes are now visible in both areas

Ability to add a scoring note without applying a penalty (Useful for when you might need to apply a percentage penalty after the finish but need to note the pending penalty on the live results)

Ability to send a link from the results page of a class or division results. This will land the user directly to the selected class or division.

Event Results have been moved to the bottom of the results screen.

## **Race Dashboard Reports**

Reports have been consolidated to a button on the dashboard quick task. This lists the following reports:

Starting/Finishing Sheet (All entries that have not withdrawn)

Progressive Finish Sheet (All entries still racing, not retired etc.)

Customs Report

Marina Report

Outstanding Tasks by Entry

Retired Report (List of all entries retired from the race)

## **Manage Race Crew**

A competitor managing a race entry will have a clear indicator of the number of crew in their race crew without having to count them.

## **Merge Accounts**

FIX – Bug when merging accounts in the race office.
